

Here is what I personally use to write assignments, using the power of Pandoc!

Getting Started

My main editor is just VSCode, with the following extensions:

- <https://marketplace.visualstudio.com/items?itemName=Gruntfuggly.triggertaskonsave>
- <https://marketplace.visualstudio.com/items?itemName=James-Yu.latex-workshop>
- <https://marketplace.visualstudio.com/items?itemName=yzhang.markdown-all-in-one>

Make sure **pandoc** is also installed, along with **pdflatex** (or some other latex) if you want more advanced features to work.

(This only works on a unix machine, so you Windows users may want to use WSL)

If you want to try it out, you can simply clone this gist, and open it up in VSCode.

Editing

Simply edit any **<file>.md** file, and hit save. - This will trigger the script in **scripts/mdpdf.sh** to run, and convert it into **<file>.pdf**. - Typically this is very fast, taking about 1 second, and the LaTeX workshop extension will auto refresh the PDF!

If you want to learn more about what is possible, you can read the Pandoc User's Guide

Example

If you want to see an example of what you can do, check out **example.md**! It has a mix of markdown and latex, and shows off some of the features you can use.
