

Pandoc Mixed Markdown/Latex Example

1. This is a markdown section.

```
// you can easily embed code blocks in markdown  
int main() {  
    cout << "You also get syntax highlighting in pandoc!" << endl;  
    return 0;  
}
```

2. When you want to write some math, you can use latex syntax. For example, the following is a quadratic formula:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{1}$$

When you want to create a new page, you can just use the latex `\newpage` command.

Here is a markdown table:

Name	Age	Grade
Alice	20	A
Bob	21	B

And here is a latex table:

Name	Age	Grade
Alice	20	A
Bob	21	B

We can also write inline math! For example, the formula for the area of a circle is $A = \pi r^2$.

You can even draw diagrams using latex. For example, here is a simple diagram of a triangle:
